`i = 1  i <= 3  i++`

i	200*i
1	200
2	400
3	600
4	exits

→ Runs a for loop which iterates over i 3 times

The led will comes on 3 times for varying time durations (200, 400, 600) and stays off for 200 ms.

the next part is a nested loop.

j	k	
1	0	Blink
	1	Blink
	2	Exit
2	0	Blink
	1	Blink
	2	Exit

In every run of the inner loop, the led blinks once for 100 ms.

∴ Led blinks 4 times.
